NITISH NARAYANAN

Solution Engineering Lead | CPaaS, CCaaS & Agentic AI | Presales & Solution Design

Bengaluru, India |+918121299705| nitishnarayanan002@gmail.com | linkedin.com/in/nitish-narayanan| nitishnarayanan.vercel.app

PROFESSIONAL SUMMARY

Customer engagement and solution leader with 10+ years across CPaaS, CCaaS and conversational AI. I lead the Solution Engineering Chapter at Infobip, directing teams across North and South India in a player-coach model. I began my career selling cloud contact centre solutions at Ozonetel and have since led solution design for enterprises in healthcare, retail and automotive. Current focus areas include agentic AI for customer engagement, WhatsApp automation and voice AI integrations, supported by hands-on Claude Code work on SE tooling.

PROFESSIONAL EXPERIENCE

Solution Engineering Lead (Chapter Lead) | Infobip, Bengaluru *July 2025 – Present*

- Built an AI-assisted pre-call research and demo-preparation workflow with Claude Code. For each target account, it compiles recent news, the solutions the account already uses, and objection-handling guidance for the sales team. Infobip HQ adopted it as a demo-preparation skill for Solution Engineering teams.
- Cut demo preparation from 2–3 days, sometimes a week, to hours. Replaced chatbot builds with HTML mockups that show clients how their solution will look in production, so Solution Engineers spend more time on discovery and design.
- Lead a team of six Solution Engineers across North and South India, coaching them to shift from feature-led pitching to outcome-led selling.
- Introduced AI into daily SE work, teaching the team to build their own dashboards, reports and prototypes with Claude Code.
- Designed the architecture for integrating Voice AI providers with Infobip SIP trunks, and documented it as a reference for Presales and Sales teams.
- Partner with CXOs in healthcare, retail and automotive to co-design CPaaS and AI solutions.

Principal Solutions Engineer | Infobip, Bengaluru *April 2022 – July 2025*

- Owned solution design and value delivery for CPaaS and AI-enabled customer engagement across healthcare, automotive and retail.
- Served as lead Solution Engineer for all Google Business Messages and RCS clients, supporting client growth in both channels within a single year.
- **Apollo 24|7:** As the sole Solution Engineer on the account, drove solution design and implementation with Infobip's CX consultants and integration partners. Delivered WhatsApp Flows for booking and lab-test journeys, which drove 49% more bookings and 72% higher revenue per order than the standard chatbot flow, and reduced care-centre call volume by 20%.
- **Manipal Hospitals:** Redesigned the international patient enquiry journey across WhatsApp and voice, after diagnosing where enquiries dropped off. Delivered on Infobip CCaaS with a chatbot for automated patient messages, plus marketing automation for appointment nudges and reminders.
- **TVS Automobiles:** As the sole Solution Engineer through discovery and solution design, shaped a bot-driven service flow that lets customers find their nearest dealer and book a service visit. According to the client, the solution generated around 1,000 dealer service bookings in its first month, up from roughly 30–35 before launch.

Senior Presales Engineer | Infobip, Bengaluru *December 2020 – April 2022*

- Established Infobip's Google CPaaS presales practice in India, building the technical foundation for Google Business Messages (GBM), vSMS and RCS adoption before these channels reached mainstream enterprise use.
- Served as the primary Client Solutions Engineer for Google's channels across India, covering solution design, integration feasibility and phased rollout plans for enterprise clients.
- Consulted enterprise clients across South India on digital communication transformation, from product-market fit through to implementation planning.
- Turned competitive intelligence and industry trend analysis into sales-ready material, used in enterprise deal conversations and SE enablement sessions.
- Developed project scopes and delivery plans with cross-functional teams, keeping solutions technically feasible and on schedule.

Client Solutions Engineer | Infobip, Zagreb, Croatia *November 2019 – December 2020*

- Based at Infobip's headquarters in Zagreb, Croatia, as the central technical resource for Voice and IoT solutions across APAC, LATAM and India.
- Served as go-to expert for Voice and IoT product lines, providing product education, technical solutioning and post-sales support to Presales Engineers and clients across three regions.
- Identified new use cases and integration patterns for Voice and IoT, and turned client needs into product improvement inputs for the roadmap.
- Worked with Product Owners to keep product documentation accurate and feed regional field feedback into roadmap decisions.
- Co-designed solutions with regional Presales and Sales teams, supporting enterprise deal closures across international markets.

Enterprise Presales Engineer | Infobip, Bengaluru *September 2018 – November 2019*

- Owned the full RFP and RFI process for enterprise tenders, coordinating technical responses, documentation and cross-team sign-off.
- Designed solution architectures and proof-of-concept builds to validate technical fit before sales commitments.
- Conducted feasibility analysis before each implementation, setting realistic delivery expectations and reducing technical risk for enterprise clients.
- Acted as project manager during implementation, bridging Sales, Product and Client teams to deliver on time and in scope.
- Identified expansion opportunities in post-sales engagements to grow client usage beyond initial deployments.

Technical Sales Manager and Channel Partnership | Ozonetel Communications, Mumbai *March 2016 – August 2018*

- Managed end-to-end technical sales and channel partnerships for Ozonetel's cloud communications platform across Mumbai and Ahmedabad, covering cloud telephony and contact-centre products.
- Owned the full sales cycle: discovery, product demonstration, solution scoping, pricing and proposal delivery.
- Managed telecom operator and channel partner relationships, building a partner ecosystem that extended Ozonetel's market reach.
- Responded to RFPs and RFIs from enterprise prospects, preparing technical documentation and delivering client-facing presentations for complex deals.
- Contributed to product marketing by creating demo videos and writing product blogs.

AWARDS & RECOGNITION

- Orange Star Award & BipStar Award, Infobip, 2023 and 2024, for consistent performance and cross-functional impact.

EDUCATION & CERTIFICATIONS

Executive PG Programme in Machine Learning and AI, IIIT Bangalore with upGrad, 2024 – 2026

MBA, Marketing, IBS Hyderabad, 2014 – 2016

B.E., Mechanical Engineering, KLE College of Engineering & Technology, 2009 – 2013

IBM Enterprise Design Thinking Practitioner | IBM New Collar Professional Skills | API and Webservice Introduction

SKILLS

Solution & Presales: Solution Engineering, Presales, Solution Architecture, RFP/RFI Response, Proof of Concept, Demo Preparation

Platforms & Channels: CPaaS, CCaaS, WhatsApp Business API, RCS, Voice & SIP Trunking, Conversational AI

AI & Automation: Agentic AI, Claude Code, AI Agents, Workflow Automation

Leadership: Team Leadership, Outcome-Led Selling, Stakeholder Management
